## In the Title

Please replace the title on page 1 of the original specification with the following new title AGENT DESKTOP MANAGEMENT SYSTEM APPARATUS AND

METHOD OF MAINTAINING AND IMPROVING WITH AGENT PERFORMANCE TRAINING

## In the Specification:

Please replace paragraph [0013] on page 3 of the original specification with the following replacement paragraph:

[0013] As calls arrive, an ACD 20 may route the calls to agents 22, 23 based upon call associated information. For outgoing calls, call associated information may be a called number and a purpose of the call (e.g., a sales promotion on widgets). For incoming calls, call associated information may be delivered from the <u>Public Switched Telephone Network</u> (PSTN) 16 (e.g., <u>Automatic Number Identification</u>, (ANI), <u>Dialed Number Identification Service</u> (DNIS), etc.). From the call associated information, a CPU 21 may be able to identify the caller or intended destination of the call. In either case, the call associated information allows the ACD 20 to discern a purpose of the call and to more intelligently route the call to the most qualified agent 22, 23.

## In the Drawings

Please approve the attached replacement drawings.
